

CFAES

2023 DISTINGUISHED SENIOR AWARD

“My most valuable learning experience is my time at the Aquaculture Research Lab in Kottman Hall. I have learned so much in these two years and have truly discovered my passion for science and for research. Working with fish is very rewarding and has cemented my desire to go graduate school.”

Through the SENR Honors program, I have spent the past year developing my undergraduate honors thesis.

I attended the World Aquaculture Society conference last year and gained a greater appreciation for the field.

I've served as President and Treasurer of TerrAqua, a water science-focused professional development club.
