

2021 DISTINGUISHED SENIOR

I worked as a Field Research Intern with Buckeye Ag Testing, developing research skills and improving my knowledge of agricultural chemical programs.

At my internship at Precision Agronomy Intern in Ames, Iowa I tested the efficacy of a new product that the company was developing.

I represented the university as a Sesquicentennial Scholar: I received a scholarship, participated in a development program, and served at celebrations.

“I was fortunate enough to travel to Queensland, Australia for a month to study Human Impacts on the Natural Environment. While I was there some focus was on agriculture, but also this trip allowed me to be opened up to a whole new set of information and ideas that I otherwise would not have been exposed to.”
