

2021 DISTINGUISHED SENIOR

“I received the Humanitarian Engineering Scholar distinction, a two year process requiring the completion of the classes, services hours and meetings. It was the first community with which I felt a strong bond through service within the Ohio State community.”

I completed a bid for the Associated Schools of Construction commercial construction competition.

I attended the ground breaking ceremony for a sponsored, public project along with the mayor and senate of Columbus.

Working with Professor Suchy allowed me to revisit earlier material and realize how much I can still learn.
