

2021 DISTINGUISHED SENIOR

I spent six weeks learning about agriculture, politics, and culture during my study abroad in Brazil.

I was able to help Dr. Lindsey's graduates with their projects, like winter wheat freeze tolerance, soybean cyst nematodes, cover crops, and more.

I interned at Corteva Agriscience, testing new seed treatments, herbicides, and transgenic crops in the final stages of development.

“The knowledge and experience I gained during my five and half months in Wisconsin provide me with a sense of self-accomplishment because I proved to myself that I am capable of not only surviving but thriving at difficult activities like field research and moving 800 miles away from home.”
