

# 2021 DISTINGUISHED SENIOR

“Working at Abbott Nutrition gave me the opportunity to travel across the United States to conduct engineering studies. I have also gained a global perspective from working in cross functional teams in Ireland, Singapore, and the Netherlands. I found a sense of success to be able to lead projects and implement new methods.”

The Midwest Regional Rally connected me to students interested in food and impacting the world's food supply with engineering methods.

I Participated in the Aspiration for Women's Advancement and Retention in Engineering and Sciences, where I learned many skills from my mentor.

I implemented new lab methods and developed a new product formulation at Abbott Nutrition, among other achievements.
