

2021 DISTINGUISHED SENIOR

I assisted Dr. Welty's research by scouting, collecting stink bug eggs, releasing parasitoids and tracking stink bug egg masses.

I assisted Dr. Adams's lab in rearing and caring for ant colonies at the insectary.

I presented and educated on different species of insects at the Museum of Biological Diversity's open house to thousands of guests.

“My greatest sense of accomplishment is being able to say that I have worked in a job that was in my field of study since my sophomore year.”
