

2022 DISTINGUISHED SENIOR

I traveled to the University of Turku in Finland and met with fellow plant scientists at the Kevo Research Center.

I served as president of the Pi Epsilon Chapter of Sigma Lambda Gamma sorority where I organized service, recruitment, and charity events.

I worked with Dr. Antonino Malacrino conducting research on the genetics of tomato plants.

“I have a deep passion for travel and collaboration and love to meet new people in my field and discuss their research. I believe collaboration, both internationally and between stateside Universities, fosters diversity in both people and ideas, which is a key ingredient for scientific advancement.”
