

2022 DISTINGUISHED SENIOR

I completed my thesis in the Cooperstone Lab, where I designed and executed my own experiments on tomato plants.

I spent a summer with Southwest Conservation Corps in Colorado, traveling the state working on conservation projects.

I interned at Corteva Agriscience, where I presented my research findings to the company's Genome Editing Group.

“I have learned so much about experimental design and the logistics of plant science research in [the Cooperstone lab], and I love the interdisciplinary nature of the projects. I’ve been given a lot of independence and it is really exciting to be able to design my own project.”
