

# 2022 DISTINGUISHED SENIOR

I was a research assistant in the Grottoli lab, where I completed my thesis on the effects of temperature and pH stress on coral.

I joined the OSU Club Swimming Team my freshman year and traveled the country attending meets.

After graduation, I will be completing my PhD in Earth Science at OSU under Dr. Andrea Grottoli.

“This year I have gotten the chance to work on a research project under Dr. Andrea Grottoli where I have been able to help in the production of an engineering prototype that will mitigate bleaching impacts on coral reefs.”
