

2022 DISTINGUISHED SENIOR

“After completing my internship at Peking University, I gained confidence in my ability to be adaptable and thrive under any situation. Despite challenges I faced, I was able to be successful with my research, explored and learned to live in Beijing, and made valuable connections.”

I won a fellowship with the USDA-ARS and performed research at Cornell University's Viticulture Plant Genetic Resources Unit.

I assisted on a research project that aided in the recovery of an endangered species, Running Buffalo Clover (*Trifolium stoloniferum*).

I was a member of Pi Alpha Xi Horticultural Honors Society for four years and am currently Vice President of the OSU chapter.
