

2022 DISTINGUISHED SENIOR

“As our world continues to change, diligently protecting the fragile ecosystems located across the globe will become even more essential in preserving human, animal, and environmental health.”

I conducted influenza surveillance in swine for four years with the Animal Influenza Ecology and Epidemiology Research Program at OSU.

I conquered my personal fears by taking a skydiving class through the university.

I traveled to Oahu, Hawaii to study human-animal interactions and deepen my understanding of veterinary epidemiology.
