

## 2022 DISTINGUISHED SENIOR

“Doing research work requires a lot of trial and error and it’s why having people to work with is invaluable. I am so glad and thankful for all the support I have had during the entire process and being able to finish my thesis and defend it before I graduate.”

I completed an undergraduate honors research thesis comparing invasive and native fish species’ response to changes in water turbidity.

I researched the taxonomy and behavior of fish in Dr. Suzanne Gray’s Aquatic Physiological Ecology Lab.

I was a member of the student chapter of OSU’s Fish and Wildlife Society, where I participated in sustainability activities.
