

2022 DISTINGUISHED SENIOR

“Once I started to attend meetings with the Society of Women Engineers I knew I just found my niche. SWE has helped me become the confident woman engineer I am today. I am extremely grateful for all the leadership opportunities, friends, and conferences I have been able to attend thanks to the OSU section.”

I served as Outreach Director for the Society of Women Engineers (SWE), where I organized programming for future engineers.

I interned at Bio Med Devices in my hometown of Guilford, Connecticut, and at GE Healthcare in Madison, Wisconsin.

I traveled to England and Wales with the Castles and Cathedrals Study Abroad Program to learn about the architecture and history of the region.
