

2020 DISTINGUISHED SENIOR

I developed a cookie chip measuring tool for a local bakery, which increased the production of their most profitable product.

I was a research assistant in field operations for over 30 pieces of equipment on over 3,000 acres, focusing on power machinery.

I competed on the quarter-scale tractor student team, for which we designed, built, tested, marketed and competed with a tractor at an international level.

“As a leader, there is no greater reward than watching a peer learn or connect principles in a way that is successful.”
