

2020 DISTINGUISHED SENIOR

“It has been very interesting working on a statewide project in the nematology lab processing hundreds of soil samples. I’d like to think that my effort has helped farmers all around Ohio.”

I was a research assistant at a nematology laboratory, working on a statewide project for the Ohio Soybean Council to test for cyst nematodes.

I worked at Wayne National Forest, measuring tree species, size and seedlings in plots that were recorded 25 years ago to note changes.

I was an officer for Fish & Wildlife Society as well as Plant Health and Research Management club.
