

## 2020 DISTINGUISHED SENIOR

“My most rewarding experience was participating in a study abroad program in New Zealand, where we learned through hands-on interactions with local residents and researchers about how tourism influences and is influenced by the environment.”

I learned DNA analysis during my research project on sex ratio variation in wasps.

I interned at the Museum of Biological Diversity as a curatorial assistant in the Triplehorn insect collection.

I established a new student government and attracted more members to the entomology club, Chrysalis.
