

2020 DISTINGUISHED SENIOR

“Facilitating the Cristo Rey High School Science Club was particularly rewarding because I got to share my love of science with future scientists and help them think about the opportunities within that field.”

I assisted with research in reproductive physiology at Ohio State and a behavioral study at the Columbus Zoo.

I interned with the Animal Medical and Emergency Hospital, where I assisted with animal evaluations, radiology, and administering diagnostics.

I traveled abroad to study natural resource conservation and sustainable industry and agriculture in Northern Queensland, Australia.
